American Cream Ale
An ale version of the American lager style.
Clean, light and simple to brew. Faint malt notes with a hint of corn-like presence. An easy drinker.

IBUs: 16 - 18  |  OG: 1.049 - 1.053  |  FG: 1.010 - 1.014
ABV: 5.25% - 5.75%  |  Difficulty: Easy  |  Color: Straw

Glossary
OG  |  DME  |  Dried Malt Extract
Original Gravity  |  LME  |  Liquid Malt Extract
SG  |  IBU  |  International Bittering Units (Tinseth)
Specific Gravity  |  CO₂  |  ABV  |  Alcohol by Volume
FG  |  Final Gravity  |  Carbon Dioxide

Contents
• Ingredients  • Priming Sugar
• Grain Bag(s)  • Bottle Caps
• Brewing Procedures
Hops may vary due to availability.

Ingredients
FERMENTABLES
3.3 lb. Extra Light LME
2.0 lb. Pilsen DME
1 lb. Corn Sugar
HOPS
1 oz. CZ Saaz
1 oz. Willamette
YEAST
1 Sachet

Recommended Procedures
NOTE: This recipe incorporates late malt additions to ensure the lightest color possible for this beer style. Refer to BREW DAY SCHEDULE.

BREW DAY (DATE __/__/__)

1. READ
Read all of the recommended procedures before you begin.

2. SANITIZE
Thoroughly clean and sanitize ALL brewing equipment and utensils that will come in contact with any ingredients, wort or beer with a certified sanitizer, e.g., Star San or IO Star.

3. START BOIL
Pour 2.5 gallons of clean water into your brew pot and begin to heat¹. Bring your water to a gentle, rolling boil. Add ONLY the included LME to the boiling water². Continuously stir the extract into the water as it returns to a gentle, rolling boil³. Your water is now wort.

4. FOLLOW SCHEDULE⁴
As directed on the BREW DAY SCHEDULE (right), slowly sprinkle the hops into the boiling wort. Be careful not to let the wort boil over the pot. Using the provided BREW DAY SCHEDULE, note the time the hops were added to help keep your brew on schedule. The BREW DAY SCHEDULE will guide you through the remaining addition of ingredients. Continue the gentle, rolling boil until the boil is complete.

Brew Tips
¹We suggest doing a 2.5 gallon boil at minimum. If you have the equipment to boil more than 2.5 gallons feel free to do so. There is no need to change the amount of any of the ingredients.
²Run canisters of LME under hot water to allow the extract to pour easier.
³Pay careful attention that the extract does not accumulate and caramelize on the bottom of your brew pot.
⁴When consumed, hops can cause malignant hyperthermia in dogs, sometimes with fatal results. Even small amounts, including “spent” hops from brewing, can trigger a deadly reaction.

Recommended Brew Day Equipment
• 4 Gallon Brew Pot (or larger)  • Hydrometer
• 6.5 Gallon Fermenter  • Thermometer
• Airlock  • No-Rinse Sanitizer
• Long Spoon or Paddle  • Cleanser

BREW DAY SCHEDULE
1. Add one pack of 1 oz. Willamette hops   __:___ (time)
2. Boil 40 minutes
3. Add 2 lbs. of DME and 1 lb. of corn sugar and 1 oz CZ Saaz hops   __:___ (time)
4. Boil final 20 minutes
5. Terminate boil   __:___ (time)

Total Boil Time: 60 Minutes
Continue to Step #5
5. COOL WORT & TRANSFER
Cool the wort down to approximately 70°F by placing the brew pot in a sink filled with ice water. Pour or siphon wort into a sanitized fermenter. Avoid transferring the heavy sediment (trub) from the brew pot to the fermenter.

6. ADD WATER
Add enough clean water (approx. 64° - 72°F) to the fermenter to bring your wort to approximately 5 gallons. Thoroughly stir the water into the wort. Using a sanitized hydrometer take an Original Gravity (OG) reading. Once you are satisfied your wort is at the proper volume and within the OG range, record the OG in the ABV% CALCULATOR (right).

7. PITCH YEAST
Sprinkle the contents of the yeast sachet over top of the entire wort surface (DO NOT REHYDRATE) and stir well with sanitized spoon or paddle. Firmly secure the lid onto the fermenter. Fill your airlock halfway with water and gently twist the airlock into the grommeted lid. Move the fermenter to a dark, warm, temperature-stable area (approx. 64° - 72°F).

FERMENTATION
8. MONITOR & RECORD
The wort will begin to ferment within 24 - 48 hours and you may notice CO2 releasing (bubbling) out of the airlock. If no bubbling is evident on day two of fermentation, take a gravity reading again in 4 - 6 days and confirm fermentation has completed by comparing the gravity reading to the FG range listed at the top of the instructions. If gravity is not in the FG range, continue fermentation until it reaches the FG range. Record your FG reading in the ABV% CALCULATOR (right).

BOTTLING DAY (DATE ___/___/___)

9. READ
Read all of the recommended procedures before you begin.

10. SANITIZE
Thoroughly clean and sanitize ALL brewing equipment, utensils, and bottles that will come in contact with any ingredients, wort or beer with a certified sanitizer, e.g., Star San or IO Star.

11. PREPARE PRIMING SUGAR
In a small saucepan dissolve 5 oz. of priming sugar into 2 cups of boiling water for 5 minutes. Pour this mixture into a clean bottling bucket. Carefully siphon beer from the fermenter to a bottling bucket. Avoid transferring any sediment. Stir gently for about a minute. 1 oz. of priming sugar is equal to approx. 2.5 tablespoons.

12. BOTTLE
Using your siphon setup and bottling wand, fill the bottles to within approximately one inch of the top of the bottle. Use a bottle capper to apply sanitized crown caps.

13. BOTTLE CONDITION
Move the bottles to a dark, warm, temperature-stable area (approx. 64° - 72°F). Over the next two weeks the bottles will naturally carbonate. Carbonation times vary depending on the temperature and beer style, so be patient if it takes a week or so longer.

CHILL & ENJOY YOUR TASTY BREW AND THANK YOU FOR CHOOSING BREWER’S BEST® PRODUCTS.

Brew Tips
5 To avoid bacteria growth do this as rapidly as possible. Do not add ice directly to the wort. Alternatively, you can use a brewing accessory like a Wort Chiller.
6 Be careful not to add a volume of water that will cause the wort to fall outside of the OG range specified in the BREW STATS.
7 Within 4 - 6 days the bubbling will slow down until you see no more CO2 being released.
8 Consider transferring your beer to a secondary carboy, see “Two-Stage (Secondary) Fermentation” sidebar below.
9 Use standard crown bottles, preferably amber color. Make sure bottles are thoroughly clean. Use a bottle brush if necessary to remove stubborn deposits. Bottles should be sanitized prior to filling.

Two-Stage (Secondary) Fermentation
Brewer’s Best® recommends home brewers employ the practice of a two-stage fermentation. This will allow your finished beer to have more clarity and an overall better, purer flavor. All you need is a 5-gallon carboy, drilled stopper, airlock and siphon setup to transfer the beer. You will also need to monitor and record the SG with your hydrometer when the beer is in the ‘primary’. When the fermentation slows (5-7 days), but before it completes, simply transfer the beer into the carboy and allow fermentation to finish in the ‘secondary’. Leave the beer for about two weeks and then proceed to Bottling Day. Consult your local retailer to learn more about this technique.

SECONDARY RACK DATE ___/___/___

ABV% Calculator
(OG - FG) x 131.25 = ABV%
(_____* - _____**) x 131.25 = ____%

*OG from Step #6
**FG from Step #8
