Peanut Butter Porter

Full-bodied, rich and delicious, this brew features a creamy peanut butter taste with notes of chocolate and coffee. Finishes smooth with an optimal balance of hop character.

**BREW DAY SCHEDULE**

1. Add 1 oz. pack of Columbus hops
2. Boil 30 minutes
3. Add 1 oz. pack of UK Fuggle hops
4. Boil final 30 minutes
5. Terminate boil

**Total Boil Time: 60 Minutes**

**Brew Tips**

1. We suggest doing a 2.5 gallon boil at minimum. If you have the equipment to boil more than 2.5 gallons feel free to do so. There is no need to change the amount of any of the ingredients.

2. The grains should not be compacted inside the bag. Grains should steep loosely allowing the hot water to soak into all of the grain evenly.

3. Pay careful attention not to let your steeping water exceed 170°F which leeches tannins into the wort.

4. Run canisters of LME under hot water to allow the extract to pour easier.

5. Pay careful attention that the extract does not accumulate and caramelize on the bottom of your brew pot.

6. When consumed, hops can cause malignant hyperthermia in dogs, sometimes with fatal results. Even small amounts, including “spent” hops from brewing, can trigger a deadly reaction.

---

**Recommended Procedures**

**BREW DAY** (DATE / / )

1. **READ**
   Read all of the recommended procedures before you begin.

2. **SANITIZE**
   Thoroughly clean and sanitize ALL brewing equipment and utensils that will come in contact with any ingredients, wort or beer with a certified sanitizer, e.g., Star San or IO Star.

3. **STEEP GRAINS**
   Pour 2.5 gallons of clean water into your brew pot and begin to heat¹. Pour crushed grains into grain bag and tie a loose knot at the top of the bag². When the water is within an appropriate steeping temperature (150° - 165°F) place the grain bag into the brew pot³. Steep grains for approximately 20 minutes. Remove grain bag and without squeezing, allow liquid to drain back into brew pot. Your water is now wort.

4. **START BOIL**
   Bring your wort to a gentle, rolling boil. Add all of the included LME, DME and Lactose to the boiling wort⁴. Continuously stir the wort as it returns to a gentle, rolling boil⁵.

5. **FOLLOW SCHEDULE⁶**
   As directed on the BREW DAY SCHEDULE (right), slowly sprinkle the hops into the boiling wort. Be careful not to let the wort boil over the pot. Using the provided BREW DAY SCHEDULE, note the time the hops were added to help keep your brew on schedule. Continue the gentle, rolling boil until the boil is complete.

---

**Recommended Brew Day Equipment**

- 4 Gallon Brew Pot (or larger)
- 6.5 Gallon Fermenter
- Airlock
- Long Spoon or Paddle
- Hydrometer
- Thermometer
- No-Rinse Sanitizer
- Cleanser
- Thermometer
6. COOL WORT & TRANSFER
Cool the wort down to approximately 70°F by placing the brew pot in a sink filled with ice water⁷. Pour or siphon wort into a sanitized fermenter. Avoid transferring the heavy sediment (trub) from the brew pot to the fermenter.

7. ADD WATER
Add enough clean water (approx. 64° - 72°F) to the fermenter to bring your wort to approximately 5 gallons⁸. Thoroughly stir the water into the wort. Using a sanitized hydrometer take an Original Gravity (OG) reading. Once you are satisfied your wort is at the proper volume and within the OG range, record the OG in the ABV% CALCULATOR (right).

8. PITCH YEAST
Sprinkle the contents of the yeast sachet over top of the entire wort surface (DO NOT RE-HYDRATE) and stir well with sanitized spoon or paddle. Firmly secure the lid onto the fermenter. Fill your airlock halfway with water and gently twist the airlock into the grommeted lid. Move fermenter to a dark, warm, temperature-stable area (approx. 64° - 72°F).

FERMENTATION
9. MONITOR & RECORD
The wort will begin to ferment within 24 - 48 hours and you may notice CO2 releasing (bubbling) out of the airlock⁹. If no bubbling is evident on day two of fermentation, take a gravity reading with a sanitized hydrometer. If gravity has dropped below your OG reading then fermentation is taking place. Take a gravity reading again in 4 - 6 days¹⁰ and confirm gravity reading with a sanitized hydrometer. If gravity has dropped below your OG reading fermentation has completed by comparing the gravity reading to the FG range listed at the top of the instructions. If gravity is not in the FG range, continue fermentation until it reaches the FG range. Record your FG reading in the ABV% CALCULATOR (right).

BOTTLING DAY (DATE __/__/__)

10. READ
Read all of the recommended procedures before you begin.

11. SANITIZE
Thoroughly clean and sanitize ALL brewing equipment, utensils, and bottles that will come in contact with any ingredients, wort or beer with a certified sanitizer, e.g., Star San or IO Star.

12. PREPARE PRIMING SUGAR AND NATURAL FLAVORING
In a small saucepan dissolve 3.5 oz. of priming sugar into 2 cups of boiling water for 5 minutes. Pour this mixture into a clean bottling bucket. Start adding the peanut butter flavoring. For a light peanut butter flavor add only 2 oz., and for a robust peanut butter flavor add all 4 oz. of flavoring. Carefully siphon beer from the fermenter to a bottling bucket. Avoid transferring any sediment. Stir gently for about a minute. 1 oz. of priming sugar is equal to approx. 2.5 tablespoons

13. BOTTLE
Using your siphon setup and bottling wand, fill the bottles¹¹ to within approximately one inch of the top of the bottle. Use a bottle capper to apply sanitized crown caps.

14. BOTTLE CONDITION
Move the bottles to a dark, warm, temperature-stable area (approx. 64° - 72°F). Over the next two weeks the bottles will naturally carbonate. Carbonation times vary depending on the temperature and beer style, so be patient if it takes a week or so longer.

CHILL & ENJOY YOUR TASTY BREW AND THANK YOU FOR CHOOSING BREWER’S BEST® PRODUCTS.
